SUMMARY

Software engineer with 8 years building and running cloud-based microservices for major financial institutions — Chase, Discover, Citi, and Synchrony. Currently lead feature delivery for Chase credit card lending systems on AWS, owning services from design through production and mentoring the engineers around me. Deep in Java, Spring Boot, and AWS, with hands-on experience across the stack, and used to shipping frequently in regulated, high-traffic environments where reliability and compliance are non-negotiable.

TECHNICAL SKILLS

Languages: Java, Python, SQL, JavaScript/TypeScript, HTML/CSS

Backend: Spring Boot, Spring MVC, JPA/Hibernate, REST APIs, event-driven microservices

Cloud & Containers: AWS (ECS, EC2, Lambda, S3, EventBridge, Step Functions), Docker, Kubernetes (OpenShift), Pivotal Cloud Foundry

Databases: MySQL, MariaDB, Oracle

CI/CD & Tooling: Jenkins, Spinnaker, GitHub, SonarQube, Maven, Gradle, Vault, uDeploy

Testing & Monitoring: JUnit, Mockito, TDD/BDD, Splunk, AppDynamics, Kibana

Practices: Agile/Scrum, pair programming, code review, AI-assisted development (GitHub Copilot for scaffolding, test generation, and refactoring)

EXPERIENCE

Senior Software Engineer III

Oct 2023 – Present

JPMorgan Chase & Co. — Plano, TX

- Lead development of credit line increase features for consumer and business Chase credit cards — systems that make lending decisions for millions of cardholders under strict regulatory requirements.
- Design and build microservice APIs end to end, from data model through deployment on AWS ECS, working closely with product managers to turn business and compliance needs into working software.
- Mentor junior engineers through design reviews, pairing, and code review; raised the team's bar for test coverage and CI/CD discipline.
- Own production releases and incident response for the team's services, keeping deployments frequent while holding downtime near zero.

Senior Software Engineer II

Aug 2021 – Oct 2023

Perficient (Discover Financial Services) — Austin, TX

- Modernized the microservices behind Discover's credit card offers and referrals, running on OpenShift (Kubernetes), replacing aging components without disrupting live traffic.
- Built REST APIs serving dynamic, personalized customer interactions at scale.
- Led an offshore development team day to day — set coding standards, ran pair programming and TDD, and kept quality consistent across time zones.
- Built and maintained CI/CD pipelines that shortened release cycles and cut failed deployments.

Software Engineer

Dec 2018 – Aug 2021

Tata Consultancy Services (Citi) — Irving, TX

- Built microservices for Citi Text Banking, letting cardholders check balances and account activity over SMS.
- Drove the migration of legacy payment-alert and OTP systems to cloud microservices on Pivotal Cloud Foundry.
- Profiled and tuned backend services, cutting API response times for customer-facing flows.

Software Engineer

Jun 2018 – Dec 2018

Capgemini (Synchrony Financial) — Frisco, TX

- Migrated mid-tier services to Pivotal Cloud Foundry and streamlined CI/CD workflows for smoother production releases.

EDUCATION

M.S., Computer Modeling — Vilnius University

2016

B.S., Computer Science — Eritrea Institute of Technology

2011
